At Kalino which is on the electric Molotov-Sverdlovsk railroad line, a single-track line branches off to Kuzino via Lysva. This branch line connects the two railroad lines existing between Molotov and Sverdlovsk. Steam locomotives operated on the rail link whose permanent way utilized ballast and wooden ties. About five km south of Lysva, a single-span steel bridge 50 to 60 meters long crossed the Lysva River. Two superstructures about six meters high were observed at the two abutments of the bridge. Two guy wires each about six cm in diameter ended there. 25X1
